The Prestige Centerpost Umbrella comes in a single carton 30x32x305 cm 25Kg. and the low profile base in a carton 80x80x25 cm 45kg

This is one of our commercial grade center post aluminum umbrellas !1 (also available in mahogany or hard wood). The Prestige center-post umbrella is both elegant and robust and built to last with all parts interchangeable. The Prestige center-post umbrella is the choice for those who want durability and elegance. Featuring a large one piece aluminum pole with corresponding ribs and hubs in aluminum providing the ultimate in strength. This makes for a durable commercial center-post umbrella. The beauty and the look of aluminum or wood with ultimate strength.

All of our other centerpost models including the Capri Prestige and the Telescopic Prestige do not come with a base but low profile bases as well as in-ground and surface mounted bases are available respectfully for the different pole sizes.

**Stones are not included but are readily available at home improvement stores such as Home Depot or Lowes.*

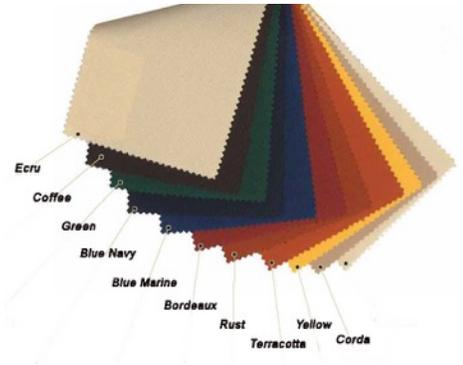

Rain gutters can be used to provide continuous protection from rain or shine. They can connect several umbrellas together to form one large canopy, or they can connect one or multiple umbrellas to a building. Our gutters are conically manufactured, and when attached to the umbrella they provide a slight decline to ensure good drainage. Threaded aluminium pipes are inserted into the material sleeves and connected together to further improve drainage. The rain gutter is attached to the umbrellas roof support by snap hooks. Adding lights to the umbrellas increases the time that can be spent on the terraces enjoying the outdoors. The warm light provides an ambience that most people appreciate. We provide different types of lighting for our umbrellas based on your needs and effect desired.

Structure Colors

*Our structures are available in steel (black or white) or wood and our canopies and ribs are in aluminum and painted in anthracite grey or white. *they are also available in wood and in other optional colors*

Our canopies are constructed of an Ecru color "Tempotest" acrylic marine fabric, the European equivalent to Sunbrella. Vents in the canopy allow for air passage and allow for more stability in heavier winds. All of these fabrics are fade resistant, water, oil, and dirt repellent. Tempotest fabric is 100% solution dyed acrylic fibre, breathable, extremely resistant, and suitable for awnings of large dimensions as well as for sails structures, marine applications and for large garden sunshades and are available in more than 200 colors.

**We will be happy to work with your architect on the site planning to achieve the best possible installation solution*
